not working A: As far as I know, at least for my Windows 10 system, the connection still wasn't detected. There was no option to connect to my WiFi network. So I couldn't login with the username and password, or if I chose a "manual connection" the password was required as well. So I was stuck at the "enter your username and password" screen. After clicking on "Connect with your network" I saw the connection screen. In the log in page, it showed No valid Wi-Fi networks were found and in the configuration window No valid Wi-Fi networks were found. After some researching I came across this, which suggested that the driver wasn't installed properly. First, try the connection again. If the connection still isn't detected, check if the driver is installed correctly. What is the nearest to $1/2$ in 4, 0.3, $5/6$, -1 ? 0.3 Which is the closest to -2 ?
